

CONSULTANT – OPERATIONS ENGINEERING

Company Background

Analytics Operations Engineering, Inc. is a unique Boston-based consulting firm focused on applying Operations Research and other quantitative methods to solve challenging operations problems. Founded in 1994, Analytics is a group of highly trained consultants, all of whom hold Masters or PhD degrees from top academic programs throughout the country. Our projects have dramatically improved productivity, lowered costs, increased capacity, and enhanced service levels at numerous Fortune 500 and smaller corporations throughout the world.

We are seeking experienced Operation Research professionals who can successfully provide team and client leadership for our worldwide consulting projects.

Job Description

The role of Consultant varies depending on the requirements of each engagement and the capabilities of the Consultant, but typically involves the following:

- Provide thought leadership and oversee quality of work product for client deliverables
- Primary contact and liaison with project leaders at client
- Developing robust solutions to operations issues
- Operations modeling and analysis
- Data collection, organization, and evaluation
- Software tool development

The work involves regular client interaction and will require some travel.

Qualifications

Successful applicants should have the following qualifications:

- Ph.D or MS in Operations Research or related field
- 2-3 years work experience preferred
- Strong communication skills. Fluency in English
- Programming experience
